

Entropic gateway · N = 256 · T_N = 320 t.u.

n_steps = 12,800,000 · h = 2.5e-05 · B = N n_steps = 3.277e+09 walker-steps · complete seeds: ABF 32/32, ABF+FR 32/32

FR genealogy and activity vs budget fraction u

Line = median across seeds; band = interquartile range (25th-75th percentile) across seeds. Metrics are the frozen SCIENTIFIC_PLAN section-4 quantities, unsmoothed.

FR cap = 20 events per opportunity (the historical gateway rule $\max(1, \text{floor}(0.08 N))$), floor included; genealogy window 1.6 t.u.; ABF: ESS and family sizes undefined (each walker its own lineage), unique ancestors = N (blue line in e).

Events per opportunity: realised deaths (filled, when the engine saves them) and capped candidates kd + kc (outline); seed-pooled whole-run histogram, log scale.
