

ethane/LTA 150 K: convergence curves for ALL N (supplementary)

Equal total budget per arm per seed: $B = N \times n_steps = 3.072e+08$ walker-steps at every N ($h = 0.0002$, $T_N = B \cdot h / N$); 16 seeds per (N , method). Seed medians on the normalised budget axis; colour = N (light = small N).
