Establishment and crossings vs budget fraction u

Line = median across seeds; band = interquartile range (25th-75th percentile) across seeds. Metrics are the frozen SCIENTIFIC_PLAN section-4 quantities, unsmoothed.
Establishment (frozen): first save after which the instantaneous far-state fraction (right well x > 0.5) stays ≥ ½ of its uniform target 0.361; the cumulative-visitation version uses C_all (far-state bins) against ½ of their bin share. True events never count a copy (clones inherit labels).
Null calibration at N = 128: an EXACTLY uniform population (far count ~ Bin(N, 0.361) per save) fails the instantaneous criterion at a save with p = 5.53e-06 and passes every save of the second half with P = 0.999.
