Gateway family expA/shift_lam128 · N = 512 · T_N = 160 t.u.

n_steps = 6,400,000 · h = 2.5e-05 · B = N n_steps = 3.277e+09 walker-steps · complete seeds: ABF 32/32, ABF+FR 32/32

Configuration summary vs budget fraction u (budget-normalised)

ABF (n = 32) · ABF+FR (n = 32) · interquartile range · strict threshold · mid threshold · loose threshold · reference

Line = median across seeds; band = interquartile range (25th-75th percentile) across seeds. Metrics are the frozen SCIENTIFIC_PLAN section-4 quantities, unsmoothed.
(1)-(3): markers = persistent crossing of the seed-median curve; 'cens. a | b' = seeds with a censored tau per arm; shaded below the grey line = EM bias at h (analytic vs this dynamics' EM-consistent reference); dash-dot in (2) = the zero-noise floor 0.0323 of e_F′ (hard lower bound). (4) top F, bottom F′ at u = 0.1 (left) and 1 (right), same alignment as e_F. (5) seed-mean instantaneous density / uniform, diverging scale clipped at 4.
