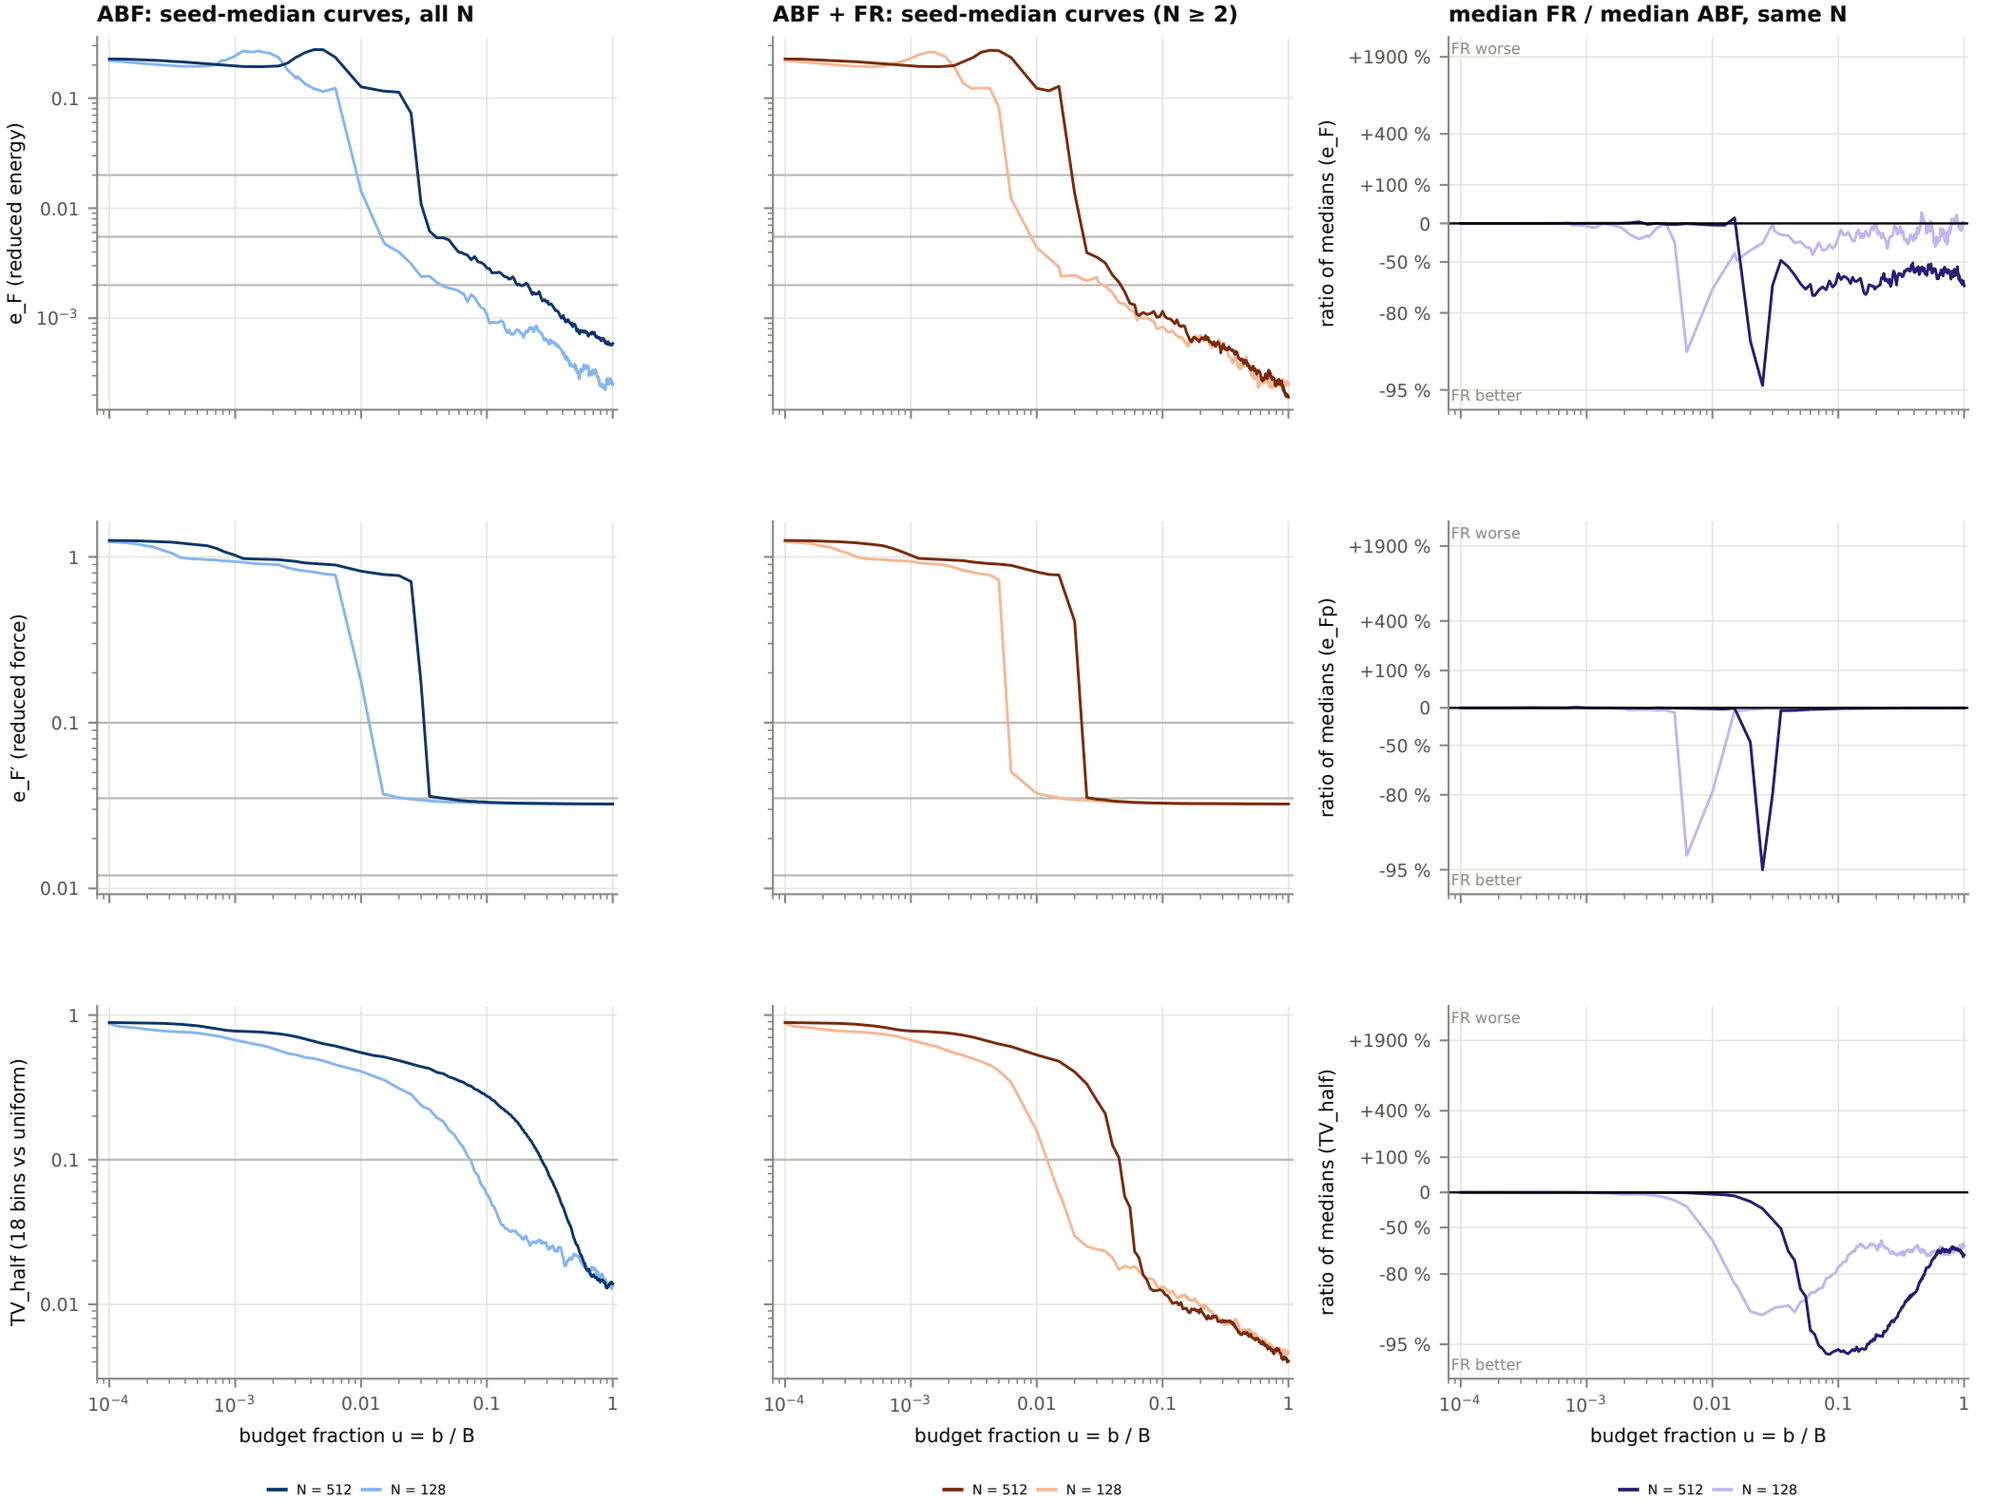
gateway shift_lam128: convergence curves for ALL N (supplementary)

Equal total budget per arm per seed: B = N × n_steps = 3.2768e+09 walker-steps at every N (h = 2.5e-05, T_N = B h / N); 32 seeds per (N, method). Seed medians on the normalised budget axis; colour = N (light = small N).



gateway shift_lam128 · S7s_convergence_all_N · status: all planned (N, seed, method) complete · FR is not defined at N = 1 (ABF only, by design).
Every planned N is listed in the legends (below the bottom row); an N without curves is greyed with its status. Right column: median FR curve / median ABF curve at the same N (below 0 = FR lower).
