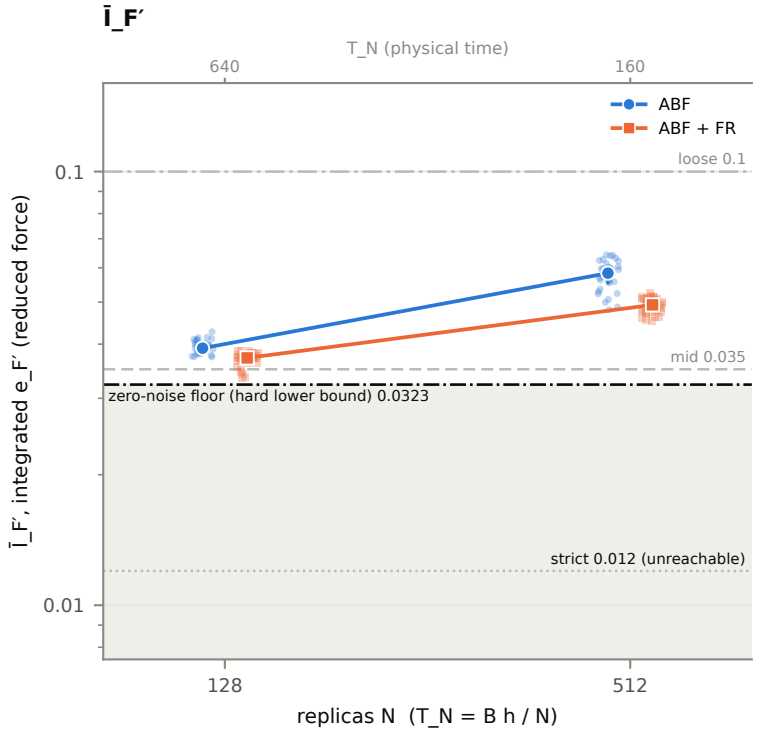
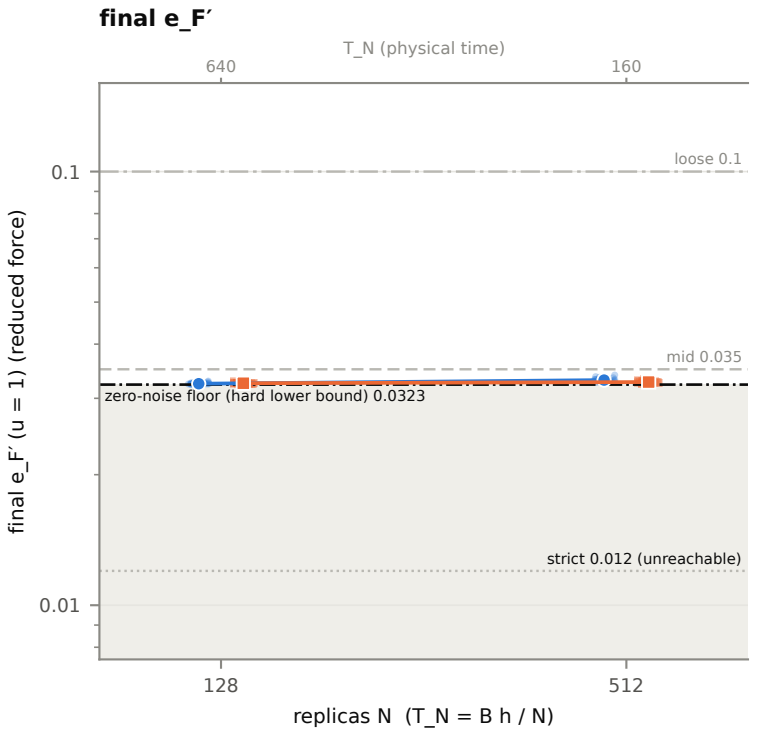
gateway shift_lam16: absolute mean-force error vs N

Equal total budget per arm per seed: B = N × n_steps = 3.2768e+09 walker-steps at every N (h = 2.5e-05, T_N = B h / N); 32 seeds per (N, method). ABF and ABF + FR: seed median, IQR and per-seed points.





gateway shift_lam16 · S2_mean_force_abs_vs_N · status: all planned (N, seed, method) complete · FR is not defined at N = 1 (ABF only, by design).
Markers: seed median; whiskers: IQR over seeds; faint points: individual seeds. Grey lines: the frozen strict / mid / loose thresholds of e(t) (shown for scale on the integrated errors as well).
Reference floors: Ibar_Fp: every estimate lies above the zero-noise floor 0.03227 ($e^2 = stat^2 + floor^2$); thresholds below it are unreachable by construction; final_e_Fp: every estimate lies above the zero-noise floor 0.03227 ($e^2 = stat^2 + floor^2$); thresholds below it are unreachable by construction.
