

Walker traces with y (D4): I: $\alpha = 0$ (purely energetic barrier in x; deterministic force), $N = 128$
 First four traced walker ids; FR lines break where an id is reborn (copy of another walker); samples every 0.1 t.u. to $t = 40$, sparser later.
 EXPLORATORY: this quantity is not preregistered (SCIENTIFIC_PLAN sections 4 and 6)

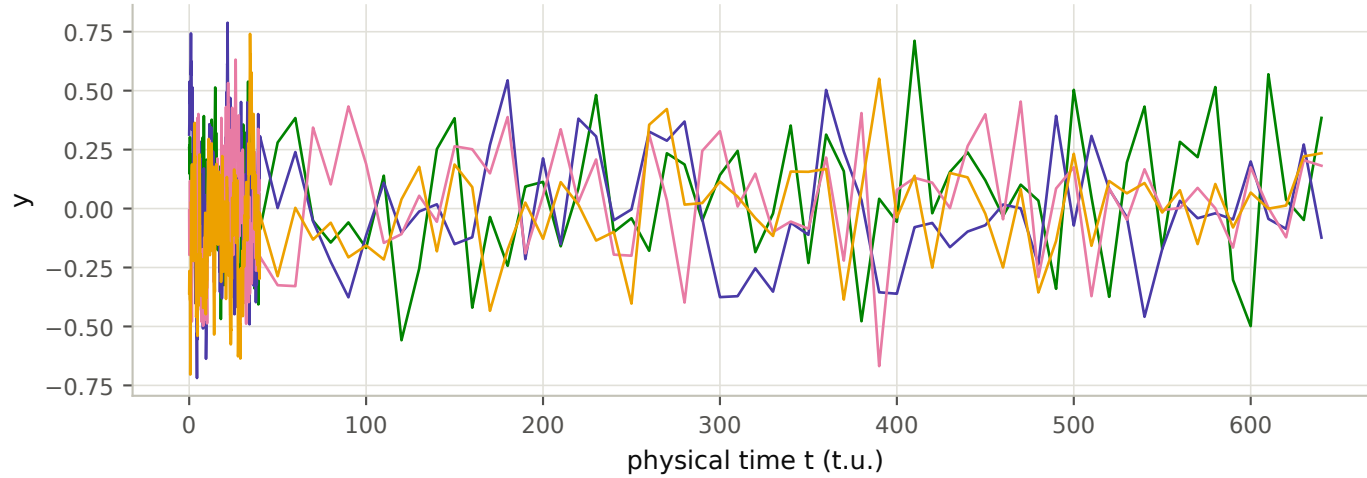

(a) ABF, seed 8100: $x(t)$

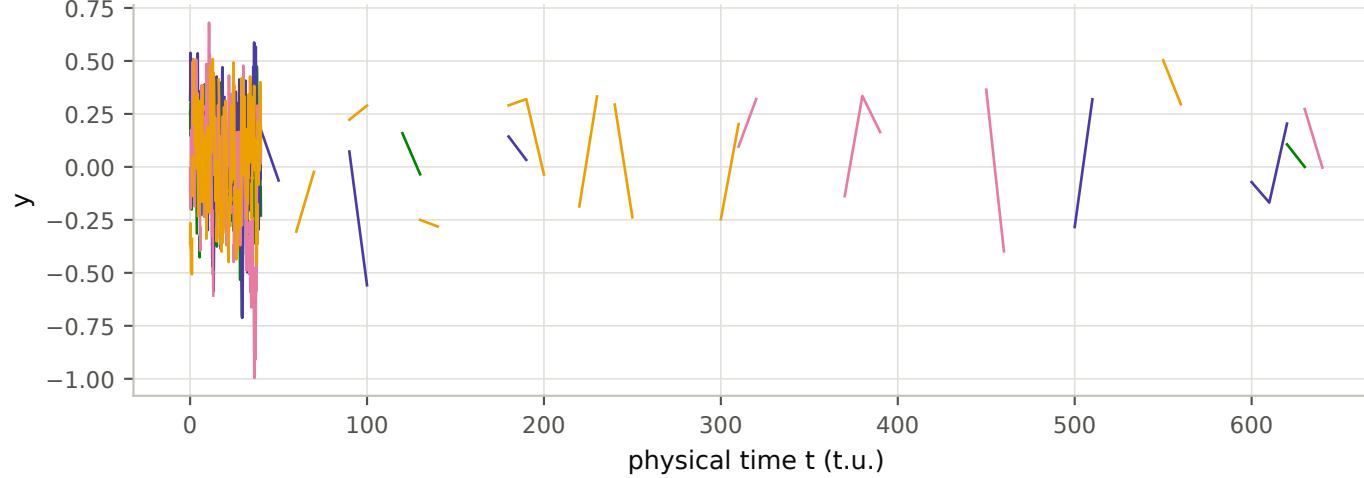

(b) ABF+FR, seed 8100: $x(t)$

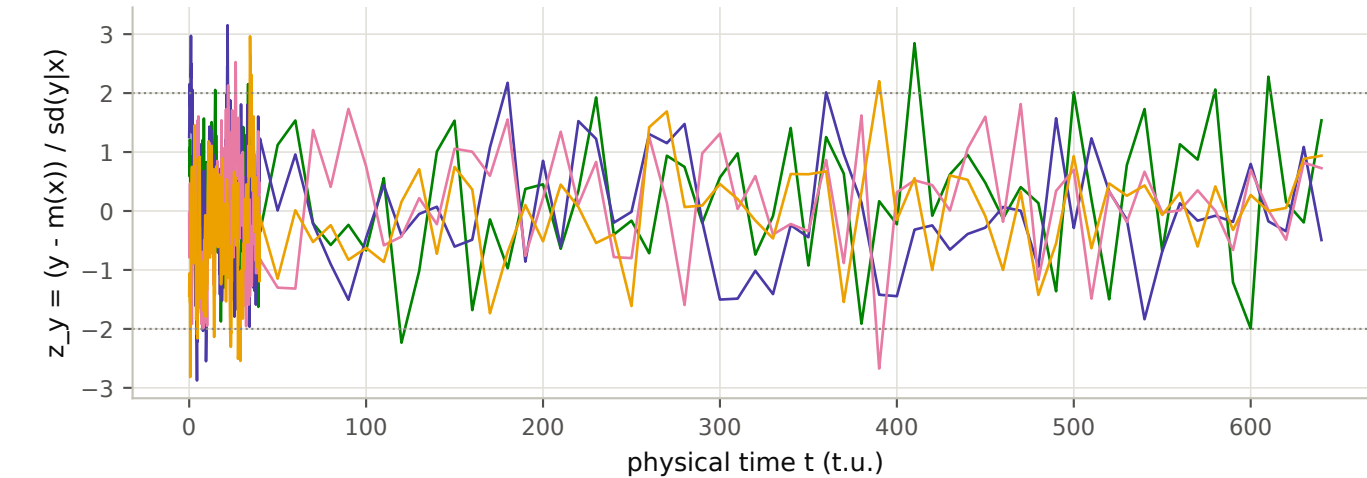

(c) ABF: $y(t)$

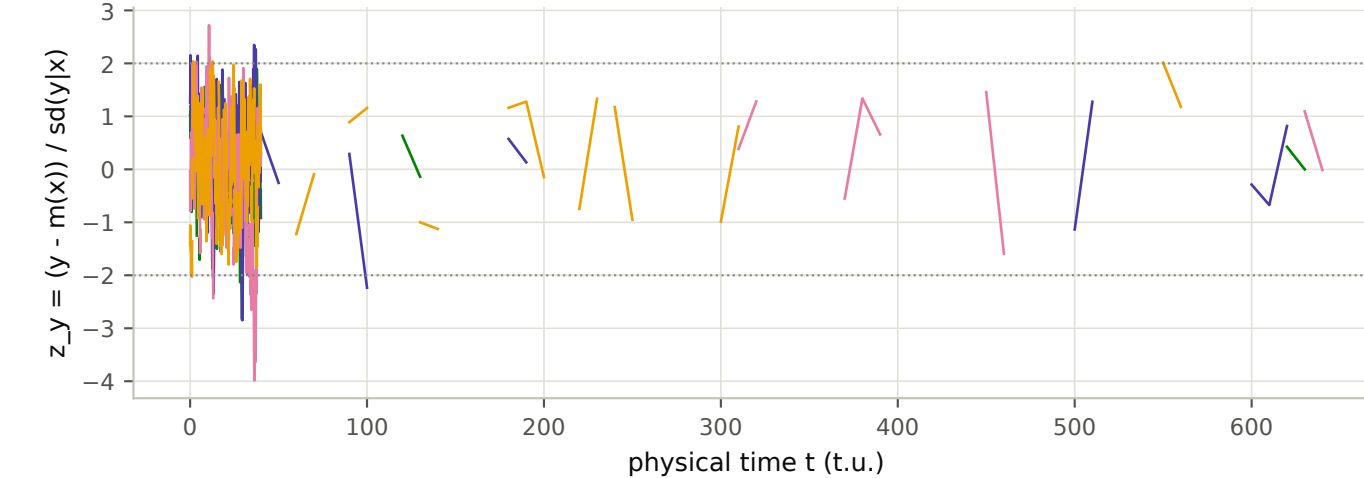

(d) ABF+FR: $y(t)$

(e) ABF: standardised y (dotted: ± 2)

(f) ABF+FR: standardised y (dotted: ± 2)
