

D3 deposits by time since the walker last crossed the gate: I: shifted fibre, kappa = 1 (variance-matched control; constant width, curved slow fibre), N = 128  
 Fractions of the deposits per region (seed median and IQR; ABF+FR n = 32, ABF n = 32). Clones inherit the crossing time. y ranges shared by every cell of this experiment at this N, capped at 1.

— crossed [0,0.1] t.u. ago    — crossed [1,10] t.u. ago    — never crossed    - - ABF (dashed)  
— crossed [0.1,1] t.u. ago    — crossed  $\geq 10$  t.u. ago    — ABF+FR (solid)     interquartile range over seeds
