

S2 free-energy and floor-free mean-force convergence, Experiment I (matched free energy), $N = 128$ (vs physical time)
 Frozen scorer curves (analytic F^* , F^*); dotted: the frozen tau thresholds (e_F 0.002 / 0.0055 / 0.02; $e_{F'}_{\text{stat}}$ 0.004 / 0.0136 / 0.0946). Seeds per cell (ABF, FR): alpha1 32/32, alpha0.5 32/32, alpha0 32/32, shift 32/32
