

gateway lam0.1: absolute free-energy error vs N

Equal total budget per arm per seed: $B = N \times n_{\text{steps}} = 3.2768\text{e}+09$ walker-steps at every N ($h = 2.5\text{e}-05$, $T_N = B h / N$); 32 seeds per (N , method). ABF and ABF + FR: seed median, IQR and per-seed points.

gateway lam0.1 · S1_free_energy_abs_vs_N · status: all planned (N, seed, method) complete · FR is not defined at $N = 1$ (ABF only, by design).
Markers: seed median; whiskers: IQR over seeds; faint points: individual seeds. Grey lines: the frozen strict / mid / loose thresholds of $e(t)$ (shown for scale on the integrated errors as well).
Reference floors: lbar_F: EM bias of F vs analytic $7.9\text{e}-06$ lies below the axis; final_e_F: EM bias of F vs analytic $7.9\text{e}-06$ lies below the axis.
