

gateway lam1: convergence curves for ALL N (supplementary)

Equal total budget per arm per seed: $B = N \times n_steps = 3.2768e+09$ walker-steps at every N ($h = 2.5e-05$, $T_N = B \cdot h / N$); 32 seeds per (N, method). Seed medians on the normalised budget axis; colour = N (light = small N).

gateway lam1 · S7s_convergence_all_N · status: all planned (N, seed, method) complete · FR is not defined at N = 1 (ABF only, by design).
Every planned N is listed in the legends (below the bottom row); an N without curves is greyed with its status. Right column: median FR curve / median ABF curve at the same N (below 0 = FR lower).
