

gateway shift: convergence curves for ALL N (supplementary)

Equal total budget per arm per seed: $B = N \times n_steps = 3.2768e+09$ walker-steps at every N ($h = 2.5e-05$, $T_N = B \cdot h / N$); 32 seeds per (N , method). Seed medians on the normalised budget axis; colour = N (light = small N).
