

gateway shift: best allocation at equal budget (primary)

Equal total budget per arm per seed: $B = N \times n_steps = 3.2768e+09$ walker-steps at every N ($h = 2.5e-05$, $T_N = B \cdot h / N$); 32 seeds per (N , method). Best ABF N (all N) vs best FR N ($N \geq 2$) at equal B ; the bootstrap re-selects N in every resample.
