Median per-seed change vs ABF with 95 % bootstrap CI (16 paired seeds; right: seeds where FR is better); circles = continuous FR, squares = early-stopped FR
FR from t = 0 (continuous)
FR from t = 5
FR from t = 20
FR from t = 40 (validated schedule)
FR on 0 ≤ t < 20, then ABF
FR on 0 ≤ t < 40, then ABF
