

entropic gateway: persistent time to mean-force accuracy, physical time

Equal total budget per arm per seed: $B = N \times n_{\text{steps}} = 3.2768\text{e}+09$ walker-steps at every N ($h = 2.5\text{e}-05$, $T_N = B \cdot h / N$); 32 seeds per (N , method). $\tau(\epsilon)$ = first save after which $e_F' \leq \epsilon$ at every later save; never met: censored ($> T_N$, > 1).
