

D2(i) clone-age composition of the force deposits: II: $\lambda = 0.1$ (transverse mobility / 10), $N = 512$

Cumulative fractions at the snapshots (seed median, IQR; ABF+FR $n = 32$). ABF never clones: its deposits are all 'never cloned'. y ranges (a-c) shared by every cell of this experiment at this N , capped at 1.
