

D3 deposits by time since the walker last crossed the gate: II:  $\lambda = 0.25$  (transverse mobility / 4),  $N = 512$

Fractions of the deposits per region (seed median and IQR; ABF+FR  $n = 32$ , ABF  $n = 32$ ). Clones inherit the crossing time. y ranges shared by every cell of this experiment at this  $N$ , capped at 1.
