

D3 deposits by time since the walker last crossed the gate: I: $\alpha = 0$ (purely energetic barrier in x ; deterministic force), $N = 2048$
 Fractions of the deposits per region (seed median and IQR; ABF+FR $n = 32$, ABF $n = 32$). Clones inherit the crossing time. y ranges shared by every cell of this experiment at this N , capped at 1.
