

D2(iii) class-wise conditional force variance: I: $\alpha = 1$ (original gateway: entropic barrier share 3.47 kT), $N = 128$
 Within-bin variance of the deposited force pooled over seeds vs the exact $(2\alpha^2/\beta^2)(w'/w)^2$ (shift: $(2/\beta^2)(w'/w)^2$) bin average plus the within-bin variance of F^* ; bands (a) and error bars (b): 95 % seed-bootstrap CIs.

EXPLORATORY: this quantity is not preregistered (SCIENTIFIC_PLAN sections 4 and 6)
