

D3 deposits by time since the walker last crossed the gate: I: shifted fibre, kappa = 1 (variance-matched control; constant width, curved slow fibre), N = 128
 Fractions of the deposits per region (seed median and IQR; ABF+FR n = 32, ABF n = 32). Clones inherit the crossing time. y ranges shared by every cell of this experiment at this N, capped at 1.

— crossed [0,0.1) t.u. ago — crossed [1,10) t.u. ago — never crossed - - ABF (dashed)
— crossed [0.1,1) t.u. ago — crossed ≥ 10 t.u. ago — ABF+FR (solid) interquartile range over seeds
