

S2 free-energy and floor-free mean-force convergence, Experiment II (transverse mobility λ), $N = 2048$ (vs budget fraction)
 Frozen scorer curves (analytic F^* , F'^*); dotted: the frozen tau thresholds (e_F 0.002 / 0.0055 / 0.02; $e_{F'_{\text{stat}}}$ 0.004 / 0.0136 / 0.0946). Seeds per cell (ABF, FR): $\lambda=1$ 32/32, $\lambda=0.5$ 32/32, $\lambda=0.25$ 32/32, $\lambda=0.1$ 32/32
