

Ethane/LTA 150 K · N = 1 · T_N = 61440 t.u.

n_steps = 307,200,000 · h = 0.0002 · B = N n_steps = 3.072e+08 walker-steps · complete seeds: ABF 16/16 (N = 1: ABF only, no FR arm)

Walker trace of slot 0, seed 15000

—●— ABF (every walker its own lineage)

Trace seed 15000 = the first seed of the config with every arm complete (reproducible choice). Dots = saved trace points; lines join consecutive points only on the dense trace grid ($\Delta t = 0.05$ t.u.) and never across a lineage change or a jump > 0.75 rad (periodic wrap or slot overwritten by a copy).

Small N (N = 1, i.e. ≤ 4): each seed contributes only 1 walker to an instantaneous histogram, so instantaneous marginals are necessarily discrete (TV_inst floor $E_N[TV] = 0.944$).

Shaded: window $|\phi| < 0.791$ rad (darker) and cages $|\phi| > 2.109$ rad (lighter).

N = 1: ABF only, no FR arm.
