

# Ethane/LTA 150 K · N = 256 · T\_N = 240 t.u.

n\_steps = 1,200,000 · h = 0.0002 · B = N n\_steps = 3.072e+08 walker-steps · complete seeds: ABF 16/16, ABF+FR 16/16

## Configuration summary vs physical time

Line = median across seeds; band = interquartile range (25th-75th percentile) across seeds. Metrics are the frozen SCIENTIFIC\_PLAN section-4 quantities, unsmoothed.

(1)-(3): markers = persistent crossing of the seed-median curve; 'cens. a | b' = seeds with a censored tau per arm; shaded below the grey line = MC reference noise (RMS of the per-bin SE). (4) top  $F$ , bottom  $F'$  at  $u = 0.1$  (left) and 1 (right), same alignment as  $e_F$ . (5) seed-mean instantaneous density / uniform, diverging scale clipped at 4.
