

ethane/LTA 300 K: persistent time to mean-force accuracy, budget fraction

Equal total budget per arm per seed: $B = N \times n_steps = 3.072e+08$ walker-steps at every N ($h = 0.0002$, $T_N = B \cdot h / N$); 16 seeds per (N , method). $\tau(\epsilon) =$ first save after which $e_F' \leq \epsilon$ at every later save; never met: censored ($> T_N, > 1$).
