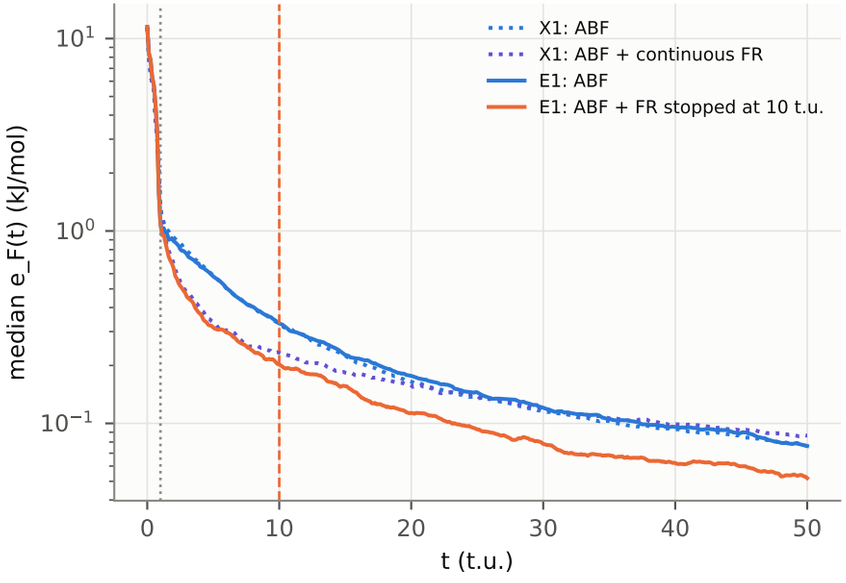
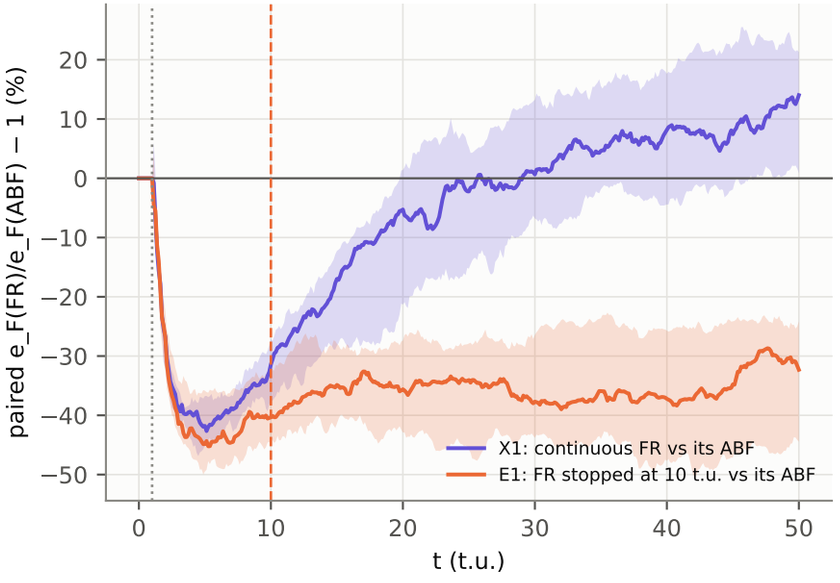
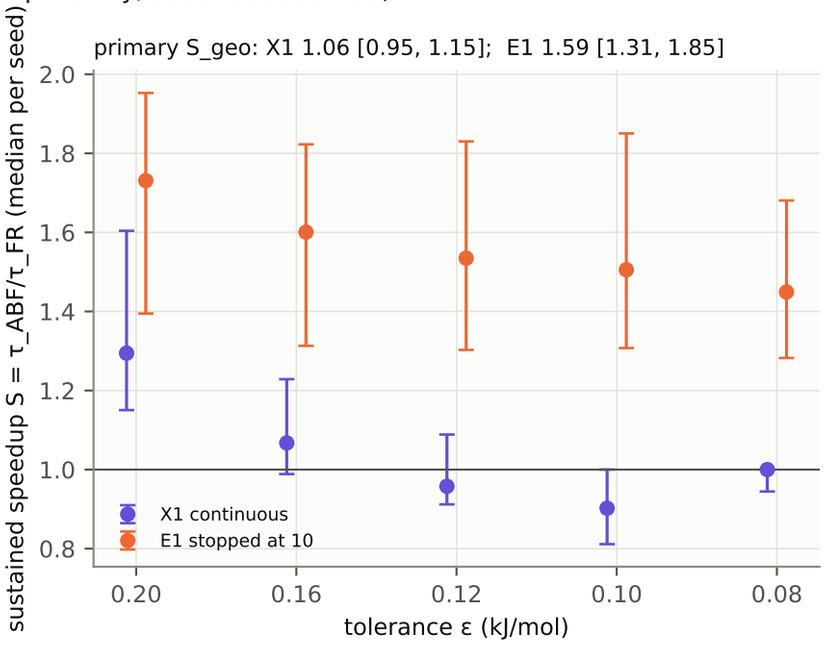
ITE 300 K, K 1024, T 50, 180 bins, FR rate 2.0 from 1 t.u.: early-stopping FR (E1, confirmatory, seeds 1100000–015) and continuous FR (X1, exploratory, seeds 980000–015)







Each block is its own paired two-arm experiment (ABF vs one FR schedule on identical seeds). Comparing X1 with E1 is a cross-block, descriptive comparison: different seeds, no pairing.
